Kaustubh Khatri

Technical Lead · Distributed Systems, Cloud Migration, AI/ML

kaustubh.khatri@gmail.com · linkedin.com/in/kaustubhkhatri · github.com/Kaustubh-Khatri · kaustubh-khatri.github.io

PROFILE

Technical Lead with 16+ years of experience designing and delivering large-scale distributed systems. Leads the cloud transformation of an enterprise risk and compliance domain and represents the wider regulatory compliance domain. Provides architectural direction that carries complex initiatives from planning to delivery, and applies distributed-systems and reliability expertise to AI/ML. Author of technical articles on distributed systems, streaming and AI infrastructure.

EXPERIENCE

Technical Lead, PayPal Oct 2024 – Present

- Lead the cloud migration for the Enterprise Risk and Compliance domain: re-architected 15+ applications for the cloud and reduced infrastructure cost by roughly 40%, spanning scale, performance and data-migration strategy.
- Represent the wider regulatory compliance domain in enterprise-wide cloud and architecture decisions.
- Lead greenfield platforms designed around regulatory compliance requirements.
- Build AI/ML solutions, including AI agents and MCP servers.

Senior Software Engineer, Distributed Systems, Workday Dec 2022 – Jun 2024

- Improved performance and scalability of BI reporting at a volume of 130 million reports a day; thread analysis and optimization raised system efficiency by 20%.
- Contributed to a reliable, scalable platform for a large-scale distributed system, working with cross-functional teams on key features.
- Reduced query execution time by 40% through query optimization.

Senior MTS, Aviatrix May 2022 – Aug 2022

- Led design and development of APIs for a multi-cloud solution and coordinated feature delivery across teams.

Software Engineer, Amazon (AWS) Jul 2020 – Apr 2022

- Designed and built AWS IoT Greengrass components spanning cloud and device, communicating over HTTP and MQTT; led feature development for complex IoT business problems.

Software Engineer 3, eBay Apr 2016 – Jun 2020

- Built and optimized checkout and points for co-branded cards in eBay payments.
- Implemented customizable ads that generated direct revenue.
- Applied ML techniques to reduce checkout latency by 80%.

Senior Software Engineer, Citrix Systems Jul 2013 – Apr 2016

- Developed web features for Citrix XenMobile Server.
- Designed and built features for Director, an enterprise application for monitoring and troubleshooting XenDesktop virtual machines.

Earlier roles 2008 – 2012

- Mobile Web Intern, Move, Inc. (first mobile version of m.realtor.com); Software Engineer, eQ Technologic (BI reporting and data-migration tools).

SELECTED WRITING AND PROJECTS

- Co-author, "Bound Verifiable Presentation (BoundVP): Binding Wallet Presentations to Browser Sessions" (Medium).
- Series on distributed-systems design: replication, sharding and transactions for a URL shortener.
- Articles on messaging platform selection, Spark vs Ray, and AI infrastructure; open-source Ray adaptive checkpointing and Kafka compaction experiments (github.com/Kaustubh-Khatri).
- Hackathon winner (multiple); built 10+ AI agents.

SKILLS

Architecture: distributed systems, microservices, event-driven architecture, reliability and fault tolerance, scaling, cloud migration, data-migration strategy

AI/ML: AI agents, Model Context Protocol (MCP) servers, model-training infrastructure, TensorFlow, Keras

Languages and data: Java, Python, JavaScript, Go, C, SQL, MongoDB, Cassandra, Redis, Kafka, Spark

Cloud: cloud migration, cloud-native architecture, AWS, Azure, GCP, Docker, Kubernetes

APIs: REST, gRPC, MQTT

EDUCATION

MS, Software Engineering, San Jose State University (2011 – 2013)
B.E., Computer Engineering, University of Pune (2004 – 2008)
